Hannah Just woke up!

swipe or click to send love!

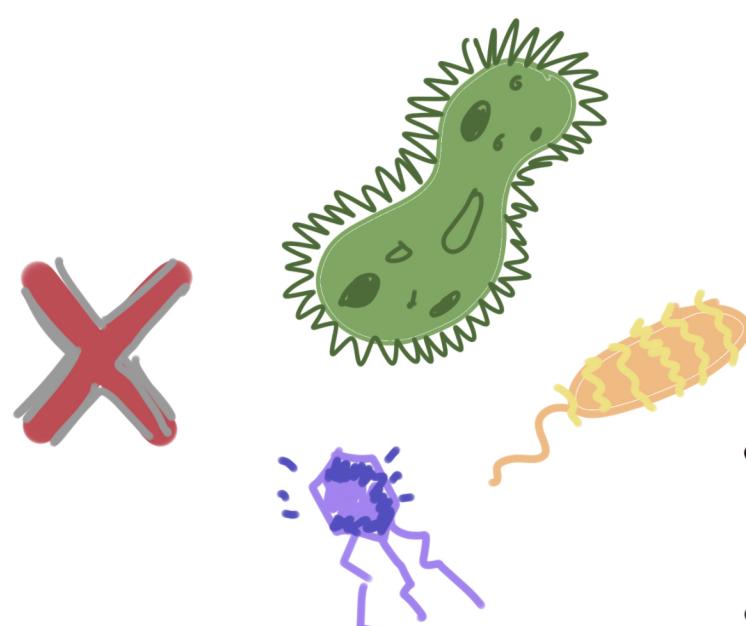

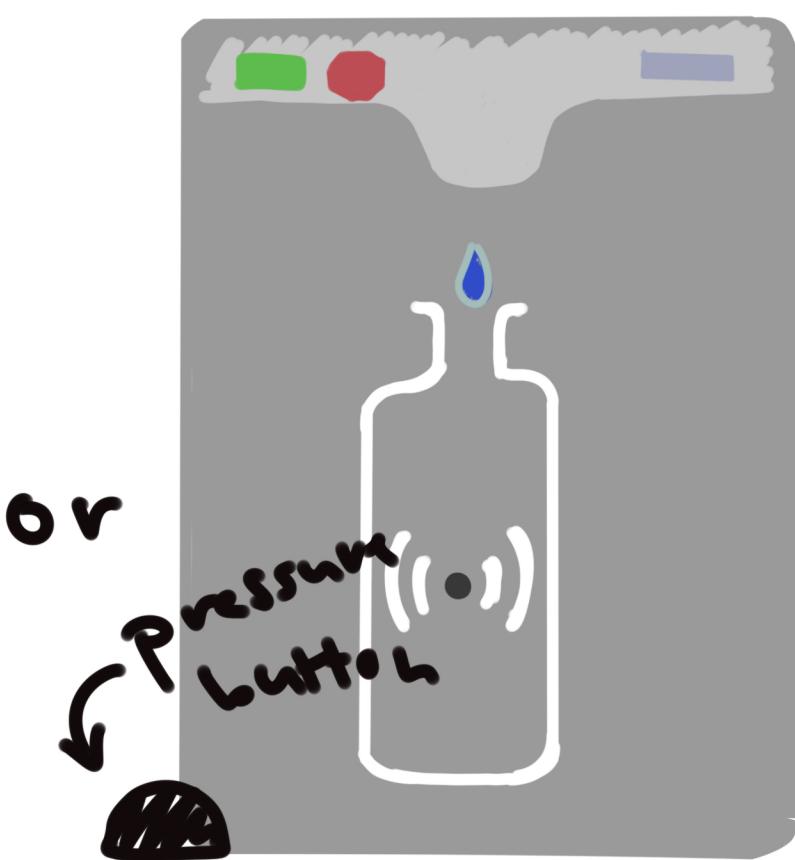

problem:
sensor is directly below stream.
When bottle is full moving can cause water to over sides.

I have to dry
bottle with
my sleeve.
now it is cold and damp.

Design choices:

- minimal and straightforward if you place the bottle in the bottle spot it will fill. Self explanatory.

Solution 1:

- use buttons.

Cons:

- not touchless bacteria & virus
- if on and off option not pressure could be left on.

**Solution 2:
move sensor**

indicate move w/ similar sensor markings and hand shaped icon

- still touchless
- water bottle is filled but sides stay dry.
